Recall #: TKC-19 | Front Passenger Airbag Inflator Recall Date: 2019 Jan 09

Recall Description

On certain vehicles long-term exposure to high absolute humidity and temperature combined with high temperature cycling may eventually degrade the propellant contained in the passenger-front airbag. This could cause the airbag to deploy with more force than normal. If the airbag inflator ruptures fragments could be propelled toward vehicle occupants or cause damage to the airbag assembly preventing its proper function.

Remedy

Owners will be notified by mail and instructed to take their vehicle to a dealer to have the passenger-front airbag inflator replaced. Note: The Canadian climate results in the propellant degrading slowly. This recall is being conducted as a precaution to address future risk. It is expected that all airbag inflators will be replaced before their function would be affected.

This recall was open as of the date/time that this report was generated.
