Recall #: 90S9 | GATEWAY CONTROL MODULE Recall Date: 2021 Dec 17

Recall Description

If liquid reaches and enters the gateway control module, mostly due to a liquid spill on the rear seats, it is being switched off as part of the safety concept. In very rare cases (such as when driving through heavy rain or deep water) there may also be water ingress through an insufficient underbody seam. Water/liquid ingress into the gateway control module may lead to various internal errors due to short circuits within the control unit. The gateway control module has a safety concept in case implausible signals are detected in the control unit. If such implausible signals are detected, the gateway switches off its function in order to avoid unwanted vehicle reactions. The vehicle remains steerable and the brake system is fully operable. The engine goes into emergency mode and remains in operation with reduced power.

Remedy

Install a protective cover for the gateway control module which will protect the part from liquid ingress. In addition, on vehicles produced until end of August 2021, the dealer will also seal the insufficient underbody seam.
