## Open Recalls

Recall #: 20UF | SUCTION JET PUMP    Recall Date: 2024 Feb 16

### Recall Description

The suction jet pump inside the fuel tank is designed to purge fuel from the Evaporative Emissions (EVAP) system. If a specific seal inside an affected suction jet pump fails, the fuel may flow directly into the EVAP system. If this happens, fuel could accumulate in the EVAP system and may leak through the charcoal canister filter element. Leaking fuel, in the presence of an ignition source, may result in a fire.

### Remedy

Replace the suction jet pump.

**ICBC Disclaimer**

The information supplied by ICBC is a report of the vehicle's status and the vehicle's claims history. Vehicle status shows whether a vehicle is qualified to be licensed and is used to track:

- vehicles sold by insurance companies as salvage
- salvage vehicles which have been rebuilt, inspected, and relicensed
- wrecked vehicles that have been decommissioned and can only be resold for parts

The vehicle status may not represent the vehicle accurately for a number of reasons, including a written-off vehicle that hasn't been reported to the B.C. vehicle registry or a vehicle with major damage that was repaired by its owner. The vehicle claims history is a report of vehicle damage and includes repairs paid by ICBC and outstanding damage estimates. It may be incomplete for various reasons, including the owner did not make a claim to ICBC or ICBC has denied the claim. In addition, the estimate information may not necessarily reflect the actual cost of repairs, list the area of the vehicle that sustained the greatest force of impact, or indicate the primary area of damage.

Consumers are encouraged to read ICBC's full statement of limitations at <http://apps.icbc.com/registration/vchr/Limitation.html>.

ICBC recommends the vehicle be inspected by a qualified mechanic to obtain a more complete assessment of the vehicle's condition.
